Fayçal Njoya

Operations & Data Governance Project Manager

Madrid, Community of Madrid, Spain

Summary

As a holistic Strategic Project Manager, up to date on modern skills such as data governance, I try to quickly align myself with the current strategy and understand other stakeholders' strategies to efficiently assist them in adding value to the overall structure and the company in whatever project I am tasked with.

Experience

L'Oréal

Data Quality Manager

May 2025 - Present (1 year 1 month)

Madrid, Comunidad de Madrid, España

Defined and implemented a comprehensive Data Quality strategy for master data across Europe, enhancing process and documentation quality.

Led a team of Quality Analysts, fostering a collaborative environment, which improved incident management response times.

Managed complex international data projects, ensuring consistent and accurate data syndication for key clients, including Sephora and Carrefour.

RCD

Data Governance Project Manager

November 2023 - June 2025 (1 year 8 months)

Madrid, Comunidad de Madrid, España

Led the efforts to create and run a new Data Governance Department and a PMO.

Data Management & Strategy: Based on the existing architecture and future objectives, I planned and executed an end to end Data Management plan that included architecture, modelling, warehousing, transformation, quality, security, roles and reporting. One of our main focuses towards the organisation as a whole was using Power Platform and Dataverse to automate (RPA) voluminous manual processes blocking user's FTEs and business growth.

ETL: Took control of the SQL server where the company warehoused all the data. The objectives included re-modelling to fully relate data, create and execute a data cleaning process, begin exploiting the full BI capabilities of the available data for all levels of stakeholders and trace gaps in the data processes created by incomplete integration related to data sourcing.

Cloud: Created and led a project to create a hybrid architecture by moving key components into Azure from the fully on premise model. This included auditing the existing architecture and its equivalent configurations and technical specifications in Azure, ensuring the low impact of the migration on operations, estimating the timing, managing the Microsoft providers, calculating the budget and calculating the Azure benefits to existing projects.

PMO: Created the PMO in order to standardise and unify the project based model of the company. To integrate the company's strategy into all actions, improve on communication and reporting to close the gap between Direction and Processes, unblock paused projects, integrate interdepartmental operations and unify project committees. I also implemented the ITIL framework to better work and assist the IT Department and all our projects.

Europ Assistance

Data Governance Project Manager

April 2022 - July 2023 (1 year 4 months)

Madrid, Comunidad de Madrid, España

I was hired as a Data Project Manager reporting to both CEO and CTO (Transformation) to develop the functionality of the data governance structure, while designing the integration plan with Generali Group's Data Ecosystem. The teambuilding strategy I developed centered around designing regressions & diligent communication processes that translated into actions that were easily steered and reported to our stakeholders.

We ensured the efficient and relevant distribution of data resources to all stakeholders and departments. Thanks to that, we developed the first fully automated control panels from the new data governance structure, also spearheading a project to allow the company to recalculate their profitability and develop an automated reporting system for all LoBs.

Bâtard S.L

Co-Founder, Head of Strategy & Operations - Program Manager

June 2020 - June 2023 (3 years 1 month)

Madrid, Community of Madrid, Spain

Strategy:

Designing the company's organizational chart

Co-creating the marketing & branding strategy

Communicate strategy and advancements to shareholders

Program management: Defining the schedules, focus & priorities. Identifying risks & designing solutions

Helping the team to implement new ideas via CORPINT processes

Operations:

Designing the process map for all activities

Designing data model (CRM/ERP & custom-based queries) in order to retrieve real-time insights

Implementing Project Management framework from overall strategy to subprocess-level

Co-designing the website's UI, as well as the e-commerce (both on WooCommerce and Shopify) & back-end processes (logistics, change management, invoicing, accountability, data analytics, and Facebook & Google integration)

Co-creating the training methodology

Configuration and implementation of digital marketing tools and their usage process such as Facebook Business Manager, Google Analytics, Google Search Console, Tag Manager, etc

GMA Corporate

Data Governance Consultant

November 2021 - February 2022 (4 months)

Madrid, Comunidad de Madrid, España

Deployment of a data management system for the Asset Management's processes:

- Gathering of the requirements to be met for each scenario
- Definition of scope, time schedule, costs, risks, quality standards & communication processes (which include trainings, etc)
- Decide on the best systems to use for the specific case: Microsoft Dynamics, PowerApps, DataVerse & PowerBI
- Definition of the new processes to be followed by the users after the BI implementation
- Developing the code for each of the gathered requirements
- Training the super users on the different tools
